

**The Italian Physiological Society (SIF) and the
newEuropean Society of Comparative Physiology and Biochemistry (ESCPBnew)**

welcome you at

**SIF – ESCPBnew JOINT WORKSHOP on Comparative and Environmental
Physiology**

PORTONOVO (ANCONA) - SEPTEMBER 19TH, 2013

Comparative and environmental physiology comprises major study areas, addressing not simply differences that exist within and between organisms, but also the adaptive and genetic processes that underlie physiological differences. It thus represents an evolutionary and dynamic approach to physiology that potentially contributes to significant new understanding of human physiology in health and disease. Hosting this workshop within its main annual event, the Italian Physiological Society strives to acknowledge and promote comparative and environmental physiological studies. On the other hand, the newEuropean Society of Comparative Physiology and Biochemistry, given the current Italian Presidency (Prof. Elena Fabbri, Univ. of Bologna) will officially share its aims and interests with the Italian Physiologists.

The Joint Workshop will provide a forum for fruitful exchanges and collaboration between the members of the two Societies. The activities will be carried out as parallel sessions with other disciplines, within the SIF Congress. Official language for the Workshop is English. Information and Registration, Abstract Submission, and Accomodation on the website of the Italian Physiological Society. For further information, please contact **SIF.2013@azuleon.org**
